Understanding Preferences

The effects of personality in the workplace

https://www.myersbriggs.org/

Objective

- Given a description of the Myers-Briggs theory, the learners will determine their own MBTI preference using the best fit of:
  - type characteristics
  - work situation effects
  - communication preferences
  - key words
  - MBTI questionnaire results

Psychological Type

- Researchers have been concerned with the effects of human differences in the workplace
- We will discuss a theory developed by Carl Jung (1875-1961)
  - explains how different people react differently to the same stimulus
  - explains how patterns of normal behaviour develop
  - differences caused by how people prefer to use their minds

Benefits of Using Types

- Offers a logical model of consistent behaviour
- Reduces interpersonal and organizational conflict
- Shows the value of diversity
- Highlights strengths and blind spots of individuals and teams
- Clarifies the fit between people and jobs
- Guided by ethical principles

Benefits of Type to Individuals

- Provides a path to self-understanding
- Gives an objective framework for examining emotional issues
- Helps improve communication patterns
- Helps identify sources of conflict
- Aids people in valuing their unique contributions
- Improves motivation and commitment

Benefits of Type to Teams

- Reduces unproductive work by improving communication
- Clarifies team behaviour and dynamics
- Helps match task activities to specific personality types
- Provides an objective framework for dealing with conflict
- Helps individuals understand how different perspectives and methods work together

Primary Mental Activities

- When your mind is active, you use one of two mental activities:
  - taking in information, called *Perceiving*
  - organizing that information and coming to conclusions, called *Judging*
- Two ways of perceiving:
  - *Sensing* and *Intuition*
- Two ways of judging:
  - *Thinking* and *Feeling*

Focus of Attention

- People use the four functions in both the external world and in the internal world
  - Sensing
  - Intuition
  - Thinking
  - Feeling
- Using these in the external world is *Extraversion*, in the internal world is *Introversion*

Why are People Different?

- Jung believed everyone has a natural preference for using one kind of Perceiving and one kind of Judging
- He also observed that people are drawn more to the external world or to the internal world
- As people exercise these preferences, distinct perspectives and approaches develop to life and human interaction
- These lead to fundamental differences

Illustrating Preferences

- A simple exercise illustrates what Jung meant by “preferences”
- Take a sheet of paper
- First sign your name as you normally do
- Then sign your name again, but use your other hand
- Describe the experience

Typical Experiences

- Preferred hand
  - feels natural
  - didn't think about it, just did it
  - effortless, easy
  - looks neat, legible, adult
- Non-preferred hand
  - feels unnatural
  - had to think, concentrate, while doing it
  - required energy
  - awkward and clumsy

Most people can sign with either hand, but the preferred one is natural and competent, where the other feels awkward

Measuring Type

- Katharine Cook Briggs (1875-1968) and Isabel Briggs Myers (1897-1980) studied Jung and developed an indicator to help individuals to know their psychological type
- The *Myers-Briggs Type Indicator* (MBTI)* is a self-report questionnaire based on Jung's theory
- We will use the MBTI model in this class for our understanding of psychological types

* *Myers-Briggs Type Indicator* and MBTI are registered trademarks of Consulting Psychologists Press, Inc.

Answering the MBTI Questionnaire

- No right or wrong answers
- Answers indicate how you prefer to look at things
  - And how you prefer to decide things
- Read each answer carefully and mark your answer on the separate sheet
- *Make no marks on the question booklet*
- Frame of reference: your "shoes-off" self
- Results ***not*** used in grading and will be kept totally private by the instructor

Four Preference Scales

- Extraversion or Introversion
  - E 45.9/52.5% I 54.1/47.5%
- Sensing or Intuition
  - S 71.7/74.9% N 28.3/25.1%
- Thinking or Feeling
  - T 56.5/24.5% F 43.5/75.5%
- Judging or Perceiving
  - J 52.0/56.2% P 48.0/43.8%

Evaluating Your Type

- The next several slides have two purposes
  - understanding differences due to type
  - deciding what your own type preferences are
- As we go through the slides, check off the items that apply to you
- At the end of each section, evaluate your preference, and choose which of the alternatives you like better
- This gives your initial self-assessment

MBTI Best Fit Worksheet

My Preferences	E/I	S/N	T/F	J/P
Characteristics				
Work Situation				
Communication				
Key Words				
MBTI Results				
Best Fit Type				

Extraversion or Introversion

- Complementary attitudes toward the world
- People who prefer Extraversion (E)
  - focus on the outer world of people and external events
  - direct their energy and attention outward and receive energy from external events, experiences and interactions
- People who prefer Introversion (I)
  - focus on their own inner world of ideas and experiences
  - direct their energy and attention inward and receive energy from their inner thoughts, feelings and reflections
- Both Attitudes used by everyone, but one is usually preferred and better developed

Characteristics of EI

- Prefer Extraversion
  - attuned to external environment
  - prefer to communicate by talking
  - learn through doing or discussing
  - breadth of interests
  - speak first, reflect later
  - sociable and expressive
  - take initiative in work and relationships
- Prefer Introversion
  - drawn to their inner worlds
  - prefer to communicate by writing
  - learn through reflection, mental “practice”
  - depth of interest
  - reflect first, act later
  - private and contained
  - focus readily

EI in Work Situation

- Prefer Extraversion
  - like variety and action
  - impatient with long, slow jobs
  - interested in activities and how others do it
  - act quickly, maybe without thinking
  - ideas by discussion
  - like people around
  - learn by talking and doing
- Prefer Introversion
  - like quiet for concentration
  - don’t mind working on one project for a long time
  - interested in facts/ideas behind their work
  - think a lot before they act, sometimes don’t act
  - ideas by reflection
  - like working alone
  - learn by reading and reflecting

EI Methods of Communication

- Prefer Extraversion
  - communicate energy and enthusiasm
  - respond quickly without long pauses to think
  - focus on people/things
  - need to moderate expression
  - communicate in groups
  - prefer face-to-face
  - talk out loud before coming to conclusions
- Prefer Introversion
  - keep energy and enthusiasm inside
  - like to think before responding
  - focus on ideas/thoughts
  - need to be drawn out, increase expression
  - communicate one-to-one
  - prefer written
  - verbalize already well thought out conclusions

EI Key Words

- Prefer Extraversion
  - active
  - outward
  - sociable
  - people
  - many
  - expressive
  - breadth
  - interaction
  - do-think-do
- Prefer Introversion
  - reflective
  - inward
  - reserved
  - privacy
  - few
  - quiet
  - depth
  - concentration
  - think-do-think

Sensing or Intuition

- Ways of taking in information
- People who prefer Sensing (S)
  - like to take in information via eyes, ears, and other senses to find out what is actually happening
  - are observant of what is going on, recognizing practical realities of the situation
- People who prefer Intuition (N)
  - like to take in information by seeing the big picture, focusing on the relationship and connections between facts
  - want to grasp patterns and see new possibilities/different ways of doing things
- Both ways of perceiving are used by everyone, but one is usually preferred and better developed

Characteristics of SN

- Prefer Sensing
  - focus on real and actual
  - value practical applications
  - factual and concrete, notice details
  - observe and remember sequentially
  - present-oriented
  - want information step-by-step
  - trust experience
- Prefer Intuition
  - focus on “big-picture”
  - value imaginative insights
  - abstract and theoretical, bored with details
  - see patterns and meanings in facts
  - future-oriented
  - jump around, leap in anywhere
  - trust inspiration

SN in Work Situation

- Prefer Sensing
  - experience and standard ways to solve problems
  - enjoy applying what they have already learned
  - may distrust and ignore their inspirations
  - few errors of fact
  - things with practical bent
  - show details of work first
  - prefer continuation of what is, with fine tuning
  - proceed step-by-step
- Prefer Intuition
  - like solving new complex problems
  - enjoy learning a new skill more than using it
  - will follow their inspirations
  - may overlook facts
  - with innovative bent
  - show overview first
  - prefer change, maybe radical, to continuation
  - in bursts of energy

SN Methods of Communication

- Prefer Sensing
  - evidence (facts, details, examples) presented first
  - practical and realistic applications shown
  - direct experience to provide anecdotes
  - orderly step-by-step
  - like straightforward and feasible
  - refer to specific example
  - follow the agenda
- Prefer Intuition
  - global schemes, broad issues presented first
  - possible future challenges discussed
  - insights/imagination to provoke discussion
  - round-about approach
  - like the novel and unusual
  - refer to general concept
  - agenda is starting point

SN Key Words

- Prefer Sensing
  - details
  - present
  - practical
  - facts
  - sequential
  - directions
  - repetition
  - enjoyment
  - perspiration
  - conserve
- Prefer Intuition
  - patterns
  - future
  - imaginative
  - innovations
  - random
  - hunches
  - variety
  - anticipation
  - inspiration
  - change

Thinking or Feeling

- Are ways of making decisions
- People who prefer Thinking
  - look at the logical consequences of a choice or action
  - seek an objective standard of truth and the application of principles
- People who prefer Feeling
  - consider what is important to them and other people
  - seek harmony and recognition of individuals
- Both ways of deciding/evaluating used by everyone, but one is usually preferred and better developed

Characteristics of TF

- Prefer Thinking
  - analytical
  - logical problem-solvers
  - use cause-and-effect reasoning
  - “tough-minded”
  - strive for impersonal, objective truth
  - reasonable
  - fair
- Prefer Feeling
  - sympathetic
  - assess impact on people
  - guided by personal values
  - “tender-hearted”
  - strive for harmony and individual validation
  - compassionate
  - accepting

TF in Work Situation

- Prefer Thinking
  - use logical analysis
  - want mutual respect
  - may hurt feelings without knowing it
  - decide impersonally, ignore people's wishes
  - firm-minded, can give criticism
  - look at principles involved in situation
  - like job done well
- Prefer Feeling
  - use values
  - want harmony / support
  - enjoy pleasing, even in unimportant things
  - decisions influenced by own and others wishes
  - sympathetic, dislike saying unpleasant things
  - look at underlying values in situation
  - like people's needs met

TF Methods of Communication

- Prefer Thinking
  - brief and concise
  - want pros and cons of each alternative
  - intellectually critical and objective
  - convinced by cool, impersonal reasoning
  - goals and objectives first
  - consider emotions and feelings as data to weigh
  - involvement with tasks
- Prefer Feeling
  - sociable and friendly
  - want why alternative is valuable and affects us
  - interpersonally appreciative
  - convinced by personal, enthusiastic information
  - points of agreement first
  - consider logic and objectivity as data to value
  - involvement with people

TF Key Words

- Prefer Thinking
  - head
  - logical system
  - objective
  - justice
  - cool
  - impersonal
  - critique
  - analyze
  - precise
  - principles
- Prefer Feeling
  - heart
  - value system
  - subjective
  - harmony
  - caring
  - personal
  - appreciate
  - empathize
  - persuasive
  - values

Judging or Perceiving

- Orientation toward the outer world
- People who prefer to use their Judging process
  - tend to live in a planned, orderly way, wanting to regulate and control life
  - sticking to a plan and schedule is very important to them
- People who prefer to use their Perceiving process
  - tend to live in a flexible, spontaneous way, seeking to experience and understand life
  - trust their resourcefulness and ability to adapt to situation
- Both attitudes used by everyone, but one is usually preferred and better developed

Characteristics of JP

- Prefer to use Judging
  - scheduled
  - organized
  - systematic
  - methodical
  - plan
  - like closure -- to have things decided
  - avoid last-minute stresses
- Prefer to use Perceiving
  - spontaneous
  - open-ended
  - casual
  - flexible
  - adapt
  - like things loose and open to change
  - feel energized by last-minute pressures

JP in Work Situation

- Prefer to use Judging
  - plan their work and follow their plan
  - get things settled and finished
  - overlook new things needing to be done
  - satisfied once decision reached
  - decides quickly
  - supported by structure
  - focus on completion
- Prefer to use Perceiving
  - enjoy flexibility in their work
  - leave things open for last-minute changes
  - postpone unpleasant tasks needing to be done
  - welcome new information
  - searches for options
  - restricted without variety
  - focus on process

JP Methods of Communication

- Prefer to use Judging
  - want schedules with tight deadlines
  - dislike surprises
  - expect others to follow through, count on it
  - state positions and decisions clearly
  - communicate results and achievements
  - purpose and direction
  - focus on task to be done
- Prefer to use Perceiving
  - uncomfortable with tight deadlines
  - enjoy surprises
  - expect others to adapt to situational requirements
  - present views as tentative and modifiable
  - communicate options and opportunities
  - autonomy and flexibility
  - on process to be needed

JP Key Words

- Prefer to use Judging
  - organized
  - regulate
  - control
  - decisive
  - deliberate
  - closure
  - plan
  - deadlines
  - productive
  - settled
- Prefer to use Perceiving
  - flexible
  - flow
  - adapt
  - curious
  - spontaneous
  - openness
  - wait
  - discoveries
  - receptive
  - tentative

Combination of Preferences

- Taking all four preferences together
  - Extraversion (E) or Introversion (I)
  - Sensing (S) or Intuition (N)
  - Thinking (T) or Feeling (F)
  - Judging (J) or Perceiving (P)
- Gives your psychological type
- But remember
  - ***everyone is an individual!***

Understanding the MBTI Report

- The MBTI report gives your reported type and preference scores
- The preference scores show how clearly you indicated a preference
  - very clear preferences: 41 up (31 up for feeling)
  - clear preferences: 21-39 (21-29 for feeling)
  - moderate preferences: 11-19
  - slight preferences: 1-9
- Low scores often represent tension between the two poles, or social pressure

Validating Your Type Preference

- Your self-evaluations and the MBTI report are indications of your type preference
- The back of the report form contains a thumb nail description of the characteristics often associated with each type
- If the indications agree and the characteristics feel comfortable, then you have likely identified your preferences
- You are the final arbiter

Putting it Together

- Sixteen types

ISTJ 16.4/6.9 Introverted Sensing with thinking	ISFJ 8.1/19.4 Introverted Sensing with feeling	INFJ 1.2/1.6 Introverted Intuition with feeling	INTJ 3.3/0.9 Introverted Intuition with thinking
ISTP 8.5/2.3 Introverted Thinking with sensing	ISFP 7.6/9.9 Introverted Feeling with sensing	INFP 4.1/4.6 Introverted Feeling with intuition	INTP 4.8/1.7 Introverted Thinking with intuition
ESTP 5.6/3.0 Extraverted Sensing with thinking	ESFP 6.9/10.1 Extraverted Sensing with feeling	ENFP 6.4/9.7 Extraverted Intuition with feeling	ENTP 4.0/2.4 Extraverted Intuition with thinking
ESTJ 11.2/6.3 Extraverted Thinking with sensing	ESFJ 7.5/16.9 Extraverted Feeling with sensing	ENFJ 1.6/3.3 Extraverted Feeling with intuition	ENTJ 2.7/0.9 Extraverted Thinking with intuition

Type Dynamics

- The four preferences indicate our choices from eight possibilities
- The middle two preferences (SN and TF) are called functions
- Type dynamics indicates the usual order of development of the four functions
- Usually the more preferred are used more often and are better developed

Objective

- When asked by the instructor, the learner will explain type development dynamics, including:
  - typical development over a lifetime
  - effects of dominant, auxiliary and inferior functions
- List the dominant, auxiliary and inferior function for each type

Dominant Function

- The most preferred function is called the dominant function
- The dominant function takes the lead in shaping the personality
- People use the dominant function most in their favourite world
  - extraverts use dominant more in external world
  - introverts use dominant more in internal world
    - this makes the dominant of introverts harder to see

Example: Find the Dominant

- ESTP
- ESTJ
- ENFP
- ENFJ
- ISTP
- ISTJ
- INFP
- INFJ
- ENTP
- ENTJ
- ESFP
- ESFJ
- INTP
- INTJ
- ISFP
- ISFJ

Note that JP indicates whether judging or perceiving is preferred in dealing with the *external* world

Strengths of Dominant

- When Sensing is dominant you are likely to
  - recognize the pertinent facts
  - apply experience to problems
  - notice what needs attention
  - keep track of essentials
  - handle problems with realism

Strengths of Dominant

- When Intuition is dominant you are likely to
  - recognize new possibilities
  - supply ingenuity to problems
  - see how to prepare for the future
  - watch for new essentials
  - tackle new problems with zest

Strengths of Dominant

- When Thinking is dominant you are likely to
  - be good at analysis
  - find flaws in advance
  - hold consistently to a policy
  - weigh the law and the evidence
  - stand firm against opposition

Strengths of Dominant

- When Feeling is dominant you are likely to
  - be good at empathizing
  - forecast how others will feel
  - allow for extenuating circumstances
  - be aware of values
  - appreciate each person’s contributions

How to Work with Dominants

- Sensing Dominants:
  - *it has to make sense - Stability*
  - point out pertinent facts
  - use their past experience
  - notice what needs attention
  - have the right thing in the right place at the right time; keep the essentials on hand
  - adopt realistic schedules and time frames

How to Work with Dominants

- Intuitive Dominants:
  - *it has to appeal to the imagination - Change*
  - recognize new avenues and possibilities
  - develop ingenious insights
  - predict future outcomes
  - conjure up plans for future contingencies
  - supply enthusiasm, zest, and a spirit of optimism

How to Work with Dominants

- Thinking Dominants:
  - *it has to be logical - Effective*
  - analyze a situation's or person's strengths and weaknesses
  - "save the day" by pointing out flaws in advance
  - stay with the goal and be consistent, moving from past to present to future
  - keep a steady course in the face of opposition
  - be objective, straight-forward, brief, and concise

How to Work with Dominants

- Feeling Dominants:
  - *it has to consider people's aspirations - Integrity*
  - ask about people's concerns and empathize with them
  - anticipate the needs of others and how they feel
  - make exceptions due to external circumstances
  - monitor and hold the organization and team to its values
  - appreciate, encourage, nourish, and support each person

Auxiliary Function

- The other function in the type code is called the auxiliary function (other of middle letters)
- Everyone needs both information and decision-making
- If dominant is an information-gathering function (SN), then auxiliary will be a deciding function (TF) and vice versa
- Auxiliary is more often used in less favoured world

Example: Find the Auxiliary

- ESTP
- ESTJ
- ENFP
- ENFJ
- ISTP
- ISTJ
- INFP
- INFJ
- ENTP
- ENTJ
- ESFP
- ESFJ
- INTP
- INTJ
- ISFP
- ISFJ

Note that JP indicates whether judging or perceiving is preferred in dealing with the *external* world

Note on Introverts

- Introverts are more likely to show auxiliary to others because their dominant function is used mainly inside in their favoured introverted world
- This means that introverts interact using their second best
- Sometimes this leads introverts to be underrated

Tertiary and Inferior Functions

- The two functions that are not in the type code are also used, just less often
- The opposite of the auxiliary is the third, or *tertiary*, function
- The opposite of the dominant is the fourth, or *inferior*, function
- The inferior shows itself when under stress, or not acting like yourself

Example: Find the Inferior

- ESTP
- ESTJ
- ENFP
- ENFJ
- ISTP
- ISTJ
- INFP
- INFJ
- ENTP
- ENTJ
- ESFP
- ESFJ
- INTP
- INTJ
- ISFP
- ISFJ

Note that JP indicates whether judging or perceiving is preferred in dealing with the *external* world

Note on Development

- Usually the dominant function is developed first in children
- Auxiliary is developed later and is not as mature
- Tertiary is developed much later, and is much less mature
- Inferior is usually poorly developed and quite childish
  - inferior often source of inspirational experiences

Accepting Differences

- Often people thing everyone should be like themselves
- When we encounter someone different, we may have a bias against them
- Type differences are a part of this
- We have to be on guard against type biases

Objective

- Given a person whose type is different from the learner's, the learner will show acceptance for the person by
  - identifying applicable type biases
  - expressing the nonbiased reality
  - showing the contribution the other's type makes in a group situation

Type Biases

- E’s may think I’s are withholding information when they are processing internally
- I’s may think E’s are changing their minds when they are processing a decision verbally
- S’s may think N’s are changing the subject when they are generating possibilities
- N’s may think S’s are unimaginative when they are being realistic about practical things

Type Biases

- T’s may think F’s are over-personalizing when they focus on impacts on individuals
- F’s may think T’s are harsh and cold when they take a detached problem-solving view
- J’s may think P’s are lazy or procrastinating when they are trying to keep options open
- P’s may think J’s are rigid and controlling when they are structuring and scheduling

Team Issues

- Groups have similar behaviour issues as people do
- Team type determined by number of team members who are E vs I, S vs N, T vs F, J vs P
- Team type can highlight team strengths, weaknesses, and performance issues
  - increase personal and interpersonal effectiveness

MBTI Lenses

- Grouping of 16 types can highlight behaviours important in different situations
- Dynamic Lens: dominant S, N, T, F
  - problem-solving or decision-making style
- Quadrant Lens: IS, IN, ES, EN
  - change or cultural issues
- Function Lens: columns ST, SF, NF, NT
  - communications issues
- Temperament Lens: SJ, SP, NF, NT
  - leadership issues

Type and Problem Solving

- Your preferred type effects your preferred problem solving method
- Best problem solving involves using all four functions
  - critical for important decisions

Objective

- Given a type preference, the learner will analyze the effects of that type on problem solving by
  - correctly identifying the dominant function
  - characterizing the effect of that function on problem solving
- Describe the four function problem solving model

Dominants and Problem Solving

- Sensing Dominants:
  - how is the problem best defined?
  - what are the ramifications now?
  - what goals are we working towards?
  - how can time lines be established and what are the immediate objectives?
  - what costs are incurred -- financial, emotional, etc.?

Dominants and Problem Solving

- Intuitive Dominants:
  - what are the common threads?
  - what are the multiple alternatives?
  - what is the relationship of the part to the system?
  - what are the opportunities for growth?
  - what are our hunches about this issue?

Dominants and Problem Solving

- Thinking Dominants:
  - is this a legitimate issue?
  - how does it affect the bottom line?
  - what are the pros and cons?
  - what is the relationship of cause to effect?
  - what are the systemic qualities?

Dominants and Problem Solving

- Feeling Dominants:
  - what are people's feelings concerning this?
  - how can different sides be accommodated?
  - what's the most diplomatic way to proceed?
  - what will increase harmony?
  - how does this affect me and the people I care about?

Problem Solving Model

- Define the problem - sensing
- Consider all the possibilities - intuition
- Weigh the consequences - thinking
- Weigh the people impact- feeling
- Make the final decision
- Do it!
- Evaluate the decision

Dealing with Change

- Type preferences have a major impact on how people deal with change
- Most of the differences are determined by quadrant
  - IS, IN, ES, EN

Objective

- Given a type preference, the learner will analyze the effects of that type in dealing with changes
  - correctly identify the type's quadrant
  - characterize how people of that quadrant deal with changes

Dealing with Change

- The four quadrants, IS, IN, ES, EN seem to group people together who react similarly to change
- This is useful for reorganization issues, organizational or team culture, or relationships with customers
- E/I relate to preferred organizational work setting
- S/N relate to how we view the world

Introducing Change to Quadrants

- Ways to introduce change to an IS
  - *relate it to what I know*
  - make practical sense to me
  - change at a steady pace, step by step
  - be careful and mindful of details
  - give me time to reflect
  - change “the way things are done around here” *only* from necessity

Introducing Change to Quadrants

- Ways to introduce change to an IN
  - *relate it to new theories and concepts*
  - let me work on change that has impact, especially conceptually and with ideas
  - don’t burden me with routines; let me change at my own pace, swiftly or slowly, as I think I need to
  - let me set my own quality control and standards
  - let me work with my own ideas
  - change the ideas and concepts

Introducing Change to Quadrants

- Ways to introduce change to an ES
  - *relate it to the work I do*
  - show me the practical results change will bring
  - offer a steady progression, step by step
  - be realistic with the schedule and don't expect too much too soon
  - let me "hash it over" with others
  - show me that my work will be more effective if I make the change

Introducing Change to Quadrants

- Ways to introduce change to an EN
  - *relate it to changing things in my world*
  - challenge my imagination
  - minimize the routine; maximize the variety
  - let me work on the broad focus and overview of the change
  - let me brainstorm with others and try out my ideas to see if they work and how people react to them
  - let me try to change the world

Communications Styles

- Preferred functions (ST, SF, NF, NT) most important here
  - ST practical and logical
  - SF sympathetic and friendly
  - NF enthusiastic and insightful
  - NT logical and ingenious
- Impacts teamwork, team tasks

Objective

- Given a type preference, the learner will analyze the effects of that type on communications preferences by
  - correctly identifying the function column of the type
  - characterizing the way people of that column prefer to communicate

How to Persuade STs

- Show me that it works
- Indicate how it saves time and money
- Demonstrate a good cost-to-benefit ratio
- Show how the results can be measured
- Allow me to try it before I buy it
- Offer specific applications and benefits
- Answer all my questions

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

How to Persuade SFs

- Indicate its practical results for *people*
- Show how it will clearly benefit me and those I care about
- Use personal testimonies from those who have benefited from it
- Show that it provides immediate results
- Set it in a personal context
- Show respect to me and others in your presentation
- Explicitly state the benefits; don't just imply them

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

How to Persuade NFs

- How how it will enhance relationships
- State how it helps people grow and develop
- Focus on my own and other's giftedness
- Show how it gives new insights and perspectives
- Indicate that people will like it, and, by implication, will like *me*
- Point out how it will help me find meaning
- Say it's enjoyable and fun

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

How to Persuade NTs

- Discuss its research base
- Highlight its theoretical background
- Demonstrate how it fits a strategy
- Show how it will increase competency
- Indicate its broad and far-reaching possibilities
- Be a credible source of information

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

Leadership Styles

- The temperament lens correlates with styles of leadership
- Temperament was independently researched by Keirsey and Bates
  - originally published as a simple type model
  - four choices
- Similar to “True Colors”

Objective

- Given a type preference, the learner will analyze the effects of that preference on leadership
  - correctly identify the temperament
  - characterize the associated leadership style

Four Temperaments

- Due to Keirsey and Bates
- Named from four Greek gods tasked with making man more like the gods
  - Apollo to give man a sense of spirit
  - Prometheus to give man science
  - Dionysus to teach man joy
  - Epimetheus to convey a sense of duty
- Highlights leadership issues

Four Temperaments

- SN choice is most important
  - Controls how we view the world
- Intuitives opt for either Apollonean spirituality or Promethean science
  - NF : Apollonean, also called Idealists
  - NT: Promethean, also called Rationals
- Sensors opt for either Epimethean duty or Dionysian joy
  - SJ: Epimethean, also called Guardians
  - SP: Dionysian, also called Artisans

Apollonean NF (Sensitive)

- 13.5/19.2% of US population
- Catalyst, spokesperson, energizer
  - works by interacting with people about values and inspirations
- A phenomenal capacity for working with people and drawing out their best
- Articulate and persuasive
- Strong desire to help others
- *Need*: authenticity
- "To thine own self be true"

NF Work Role and Leadership Style

Type	Work Role	Leadership Style
INFJ	Foreseer	Personal, predictable, and quiet
INFP	Advocator	Caring, democratic, participative, and unassuming
ENFP	Catalyst	Outgoing, democratic, participative, and energetic
ENFJ	Mentor	Democratic, participative, and people-oriented

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

Promethean NT (Cool)

- 14.8/5.9% of US population
- Visionary, architect of systems, builder
  - works on ideas with ingenuity and logic
- Ability to readily see big picture
- Talent for conceptualization and systems planning
- Insight into internal logic and underlying principles
- *Need*: competence
- "Be excellent in all things"

NT Work Role and Leadership Style

Type	Work Role	Leadership Style
INTJ	Strategist	Planning-oriented, visionary, and single-minded
INTP	Definer	Principle-oriented, visionary, and autonomous
ENTP	Inventor	Communications-oriented, visionary, and autonomous
ENTJ	Field Marshall	Action-oriented and visionary; takes charge

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

Epimethean SJ (Serious)

- 43.1/49.5% of US population
- Traditionalist, stabilizer, consolidator
  - works from a sense of responsibility, loyalty, and industry
- Administrators
- Dependable
- Able to take charge
- *Need*: belonging
- "Early to bed, early to rise"

SJ Work Role and Leadership Style

Type	Work Role	Leadership Style
ISTJ	Inspector	Authoritarian and direct; hierarchy is respected
ISFJ	Protector	Caring, rule-oriented, and quiet
ESTJ	Supervisor	Results-oriented, cooperative, authoritarian, and quite decisive
ESFJ	Provider	Softly authoritarian and decisive; hierarchy is respected

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

Dionysian SP (Impulsive)

- 28.6/25.3% of US population
- Troubleshooter, negotiator, fire fighter
  - works via action with cleverness and timeliness
- Hedonistic, live-for-now nature
- Practical
- Adept problem solving skills
- *Need*: freedom
- "Eat, drink, and be merry"

SP Work Role and Leadership Style

Type	Work Role	Leadership Style
ISTP	Operator	Egalitarian, pragmatic, and expedient
ISFP	Composer	Understanding, human, and easy going
ESTP	Promoter	Pragmatic, expedient, and with flair
ESFP	Performer	Easy going yet pragmatic and expedient

from Sandra Krebs Hirsh © 1992 by Consulting Psychologists Press, Inc.

Assessing Type: J-P

- Usually the most obvious
- Judgers tend to be more focused on a task or topic
- Judgers have built in time clock
- Perceivers are capable of generating alternatives to any situation
- Judgers tend to offer decisive opinions on most topics
- Perceivers often answer a question with another question

Assessing Type: E-I

- Usually clear over time
- Extraverts speak more loudly than Introverts
- Extraverts tend to speak more rapidly
- Introverts tend to understate points
- Extraverts use more nonverbal communication
- Introverts often appear more aloof and reserved
- Cats and Dogs

Assessing Type: S-N

- Tougher to see
- Intuitives tend to look for the meaning of an event or experience; Sensors tend to examine its components
- Sensors like to understand a process by looking at it sequentially; Intuitives randomly gather information and fit it into a model
- Sensors focus on "what is" and find "what can be" unsettling; Intuitives find "what is" depressing
- Sensors are impatient with fanciful schemes; Intuitives are impatient with many details

Assessing Type: T-F

- Can be hardest to see
- Thinkers seek objective clarity; Feelers seek harmony with people
- Feelers are usually situational and subjective; Thinkers tend to apply their decisions more uniformly and consistently
- Thinkers look for the cause and effect of a decision; Feelers show more concern for how people will feel about it
- Both have feelings: Feelers prefer to experience them while Thinkers prefer to understand them
